SUMMARY

Dynamic AI Team Leader with 1 year of experience in leading AI initiatives and stakeholder collaboration at ECRADOME. Successfully managed end-to-end AI project lifecycles, including data strategy development and API delivery, driving technical excellence. Aiming to enhance AI capabilities by leveraging skills in deployment models and handling LLMs for impactful technological solutions.

EXPERIENCE

ML Team leader

GDG on Campus (Obour branch) **August 2025 - April 2026, Obour**

- Technical Leadership: Mentored 20+ students on ML fundamentals and industry standard deployment, bridging the gap between theory and application. • Cross-functional Collaboration: Managed team deliverables and reviewed technical content to ensure high-quality community learning

AI Team Leader

ECRADOME **August 2025 - April 2026**

- Stakeholder Management: Collaborated with business stakeholders to translate complex requirements into scalable technical AI solutions. • Team Management: Led the full development lifecycle, managing data strategy, model selection, and production-ready API delivery

PROJECT

AI RecrutPRO

Self learning And Developing • github.com/Ahmed-M-Gh/AI-RecruitPro • January 2026 - Present

- **Developed** a high-performance **Semantic Matching Engine** using Vector Embeddings to automate candidate screening; **released** a batch-processing pipeline that ranks hundreds of CVs and extracts the top 25 candidates with 95% contextual precision.
- **Created** an **Automated Interview Intelligence** tool that performs multimodal analysis on video interviews, cross-referencing verbal transcripts with CV data to evaluate technical depth and skill coverage.
- **Built and Deployed** a **RAG-based LLM system** (Retrieval-Augmented Generation) to generate grounded, hallucination-free hiring reports and personalized pre-screening questions based on specific candidate data.
- **Engineered** a diagnostic **Candidate Profiling** module that automates the summarization of strengths and weaknesses, reducing the decision-making time for hiring managers.
- **Architected and Released** the entire suite as a production-ready solution using **FastAPI** and **Docker**, ensuring a scalable microservices architecture for real-time processing.

Fitness Tracker

Self Learning • github.com/Ahmed-M-Gh/Fitness-App • December 2025 - April 2026

- **Developed** a real-time **Pose Estimation pipeline** to extract 3D skeletal landmarks; **created** a geometric analytics engine that calculates joint angles and limb alignment with high precision for biomechanical mapping.
- **Built and Released** an **Automated Exercise Recognition** module that utilizes spatial-temporal movement patterns to classify exercises like Squats, Push-ups, and Bicep Curls automatically.
- **Implemented** a robust **Intelligent Rep Counter** using a state-machine algorithm; this logic tracks eccentric and concentric phases to ensure accurate counting and detect incomplete repetitions.
- **Created** a **Real-time Feedback Engine** that compares live user form against "Biometric Gold Standards," providing instant diagnostic alerts to prevent injuries and optimize performance.
- **Optimized and Deployed** the entire system as a low-latency production-ready tool; **released** a high-performance Python backend that ensures smooth, real-time video processing.

EDUCATION

Bachelor of Science in Computer Science

Minor in Artificial Intelligence • Obour Higher Institute for Engineering and Technology • 2027 • 3.2

SKILLS

Python & C++

Machine Learning & Deep Learning

Natural Language Processing & LLMs

Computer Vision

Generative AI

Strategic Planning

Adaptive Learning

Stakeholder Communication
