SUMMARY

GenAI Engineer with hands-on experience designing and deploying end-to-end LLM applications, RAG architectures, and fine-tuned models into production. Proven track record at ECRADOME leading AI initiatives, optimizing inference latency, and delivering scalable AI APIs. Skilled in Python, LangChain/LangGraph, Vector DBs, and LLM evaluation frameworks to bridge product strategy with high-performance AI deployment.

EXPERIENCE

GDG on Campus (Student Activity) | *ML Team leader* **Aug 2025 - Aug 2026**

- Guided 20+ students through comprehensive ML pipelines, from fundamentals to industry-standard deployment, closing the gap between academic theory and applied engineering.
- Directed cross-functional workflows and conducted rigorous technical reviews, elevating the accuracy and quality of community learning programs.

ECRADOME | *AI Engineer* **Aug 2025 - Apr 2026**

- Collaborated with business stakeholders to translate complex requirements into scalable AI solutions.
- Designed and shipped an end-to-end Arabic RAG system for an EdTech product, engineering a hybrid retrieval pipeline (BGE-M3 + Qdrant + cross-encoder reranking) with confidence-based response classification to minimize hallucinated answers - deployed via FastAPI with multi-subject, multi-grade support.

PROJECT

AI RecrutPRO | Check project **Jan 2026 - Sep 2026**

- Architected and deployed a scalable AI recruitment platform using FastAPI and Docker, featuring a semantic matching engine with vector embeddings that ranks CVs and extracts top candidates with 95% contextual precision.
- Engineered a multimodal video interview analysis module that cross-references verbal transcripts with CVs to automate candidate profiling, summarizing technical depth and significantly reducing hiring decision time.

ALSense | github **| *ECRADOME*** **Apr 2026 - Jun 2026**

- Built an AI-powered ALS monitoring system with grounded clinical RAG and automated alerts, earning fourth place at a regional hackathon.
- Engineered a medical-grade RAG pipeline (retrieval, query rewriting, grounding validation, and confidence gating) to answer clinical questions strictly from vetted ALS literature (EAN/AAN/NICE guidelines), minimizing hallucination risk in a healthcare context.
- Designed an automated escalation workflow that flags significant patient deterioration and triggers real-time doctor notifications, closing the loop between passive monitoring and clinical intervention.
- Delivered a production-structured FastAPI backend (patient records, assessments, emergency contacts, RAG service) with dedicated evaluation notebooks for retrieval and generation quality testing.

Football Analyzer | github **Mar 2026 - Jun 2026**

- Engineered a Computer Vision processing endpoint to analyze football video footage, automatically extracting key performance metrics including speed, positioning, and passing accuracy.
- Integrated an LLM-based coaching module that ingests the extracted physical and tactical metrics to generate actionable, personalized performance improvement recommendations.
- Deployed the complete solution as a highly responsive FastAPI service on Railway, incorporating a domain-specific conversational agent to query player statistics and advanced football analytics.

EDUCATION

Obour Higher Institute for Engineering and Technology **Sep 2023 - Aug 2027**

Bachelor of Science, Computer Science (GPA: 3.2) *Km 21, Cairo-Belbeis Desert Road, Next to El Obour City, Qalyubia Governorate*

SKILLS

- Python, c++, Machine Learning, Deep Learning, Large Language Models, Natural Language Processing, Computer Vision, Generative AI, Strategic Planning, Adaptive Learning, Stakeholder Communication, Deployment, Docker, Version Control, LangGraph, LLM, GenAI, LangChain, LangGraph, Vector Databases, RAG, Agentic AI
