SUMMARY

Dynamic AI Team Leader with 1 year of experience in leading AI initiatives and stakeholder collaboration at ECRADOME. Successfully managed end-to-end AI project lifecycles, including data strategy development and API delivery, driving technical excellence. Aiming to enhance AI capabilities by leveraging skills in deployment models and handling LLMs for impactful technological solutions.

EXPERIENCE

GDG on Campus (Obour branch)

Aug 2025 - Apr 2026

ML Team leader

Obour

- Guided 20+ students through comprehensive ML pipelines, from fundamentals to industry-standard deployment, closing the gap between academic theory and applied engineering.
- Directed cross-functional workflows and conducted rigorous technical reviews, elevating the accuracy and quality of community learning programs.

ECRADOME

Aug 2025 - Apr 2026

AI Team Leader

Startup

- Stakeholder Management: Collaborated with business stakeholders to translate complex requirements into scalable technical AI solutions.
- Team Management: Lead the full development lifecycle, managing data strategy, model selection, and production-ready API delivery

PROJECT

AI RecrutPRO [Check project](#)

Jan 2026 - Present

- **Architected and deployed** a scalable AI recruitment platform using FastAPI and Docker, featuring a semantic matching engine with vector embeddings that ranks CVs and extracts top candidates with 95% contextual precision.
- **Developed** a RAG-based LLM pipeline to generate hallucination-free hiring reports and personalized pre-screening questions based on exact candidate data.
- **Engineered** a multimodal video interview analysis module that cross-references verbal transcripts with CVs to automate candidate profiling, summarizing technical depth and significantly reducing hiring decision time.

Fitness Tracker [Check project](#)

Dec 2025 - Apr 2026

- **Developed** a Machine Learning pipeline to process and analyze time-series sensor data (accelerometer and gyroscope) from smartwatches, accurately classifying various exercise types based on movement patterns.
- **Engineered** a signal processing and peak-detection algorithm to automatically track workout sets and count repetitions, effectively filtering out sensor noise and movement variability to ensure accurate logging.

Football Analyzer [Check project](#)

Mar 2026 - Jun 2026

- **Engineered** a Computer Vision processing endpoint to analyze football video footage, automatically extracting key performance metrics including speed, positioning, and passing accuracy.
- **Integrated** an LLM-based coaching module that ingests the extracted physical and tactical metrics to generate actionable, personalized performance improvement recommendations.
- **Deployed** the complete solution as a highly responsive FastAPI service on Railway, incorporating a domain-specific conversational agent to query player statistics and advanced football analytics.

EDUCATION

Obour Higher Institute for Engineering and Technology

Sep 2023 - 2027

Bachelor of Science, Computer Science Km 21, Cairo-Belbeis Desert Road, Next to El Obour City, Qalyubia Governorate.

- **GPA:** 3.2

SKILLS

- Python, c++, Machine Learning, Deep Learning, Large Language Models, Natural Language Processing, Computer Vision, Generative AI, Strategic Planning, Adaptive Learning, Stakeholder Communication, Deployment, Docker, Version Control
